### In-vitro-meat, meat replacement (#38)

Mark Post

Maastricht University, Maastricht, Netherlands

#### Short Abstract

Cultured meat has undergone exponential growth in terms of funding, number and breadth of people working on it and in number of startups trying to commercialise the technology. We are likely not at the top of the 'hype' yet. In spite of the interest and efforts, it may still take a couple of years before we

see the first products to the market. There are important hurdles to be taken, such as scaling up, making products cost-effective, setting up a scalable supply chain of ingredients and, last but not least, regulatory approval for every market. The state of the art will be discussed and perspectives for the intermediate future will be provided.
